

## The MATRIX-System

Form Adapting Support Technique

### X-Grip XS

#### The Innovation

Saves a lot of time, with little expenditure. The complex work piece is fixed between two jaws and clamped using only one tool. With this simple operation, results are achieved much faster.

#### Functional and Economical

With axially mobile pins, the jaws of the X-Grip can adapt to each individual work piece as needed. Product-specific jaws are no longer required.
